

STREET SIGN INSTALLATIONS

POLICY NO. 20-01

PURPOSE: To provide a uniform policy relating to the installation and maintenance of street name signs.

- POLICY:**
1. The Public Works Department is responsible for maintaining existing street name signs on known maintained roadways.
 2. Existing intersections that have never received street name signage are reviewed to determine if they are on a maintained right of way intersecting with a public dedicated right of way. The intersections of two non-maintained roadways are not signed by the Public Works Department. If a citizen desires to sign a non-maintained intersection, they will be apprised of the type and sources to obtain such signs at their expense (approximately \$40.00) for installation by them.
 3. New roadways and intersections created by developers are signed and maintained by said developers at their cost per County development ordinances. When a new development receives "Final Acceptance" from the County, after two years, the Public Works Department assumes maintenance responsibility for those areas not maintained by a homeowner's association.

Replaces: Policy Presently on the Books without number.
