Review the owner's manual, check the stickers, or ask the driver the following:

- The lift must have a weight limit of at least 600 pounds.
- L The lift must be equipped with an emergency back-up system (in case of loss of power to vehicle). Is the pole present?
- ☐ The lift must be "interlocked" with the brakes, transmission, or the door, so the lift will not move unless the interlock is engaged. Ensure the interlock is working correctly.

Have the driver lower the lift to the ground:

- Controls to operate the lift must require constant pressure.
- Controls must allow the up/down cycle to be reversed without causing the platform to "stow" while occupied.
- □ Sufficient lighting shall be provided in the step well or doorway next to the driver, and illuminate the street surface around the lift, the lighting should activate when the door/lift is in motion. Turn light switch on, to ensure lighting is working properly.

Once the lift is on the ground, review the following:

- ☐ Must have an inner barrier to prevent the mobility aid from rolling off the side closest to the vehicle until the platform is fully raised.
- \Box Side barriers must be at least 1 $\frac{1}{2}$ inches high.
- The outer barrier must be sufficient to prevent a wheelchair from riding over it.
- ☐ The platform must be slip-resistant.
- Gaps between the platform and any barrier must be no more than 5/8 of an inch.
- The lift must have two handrails.
- The handrails must be 30-38 inches above the platform surface.
- \square The handrails must have a useable grasping area of 8 inches, and must be at least 1 $\frac{1}{2}$ inches wide and have sufficient knuckle clearance.
- \Box The platform must be at least 28 1/2 inches wide measured at the platform surface, and 30 inches wide and 48 inches long measured 2 inches above the platform surface.

If the ramp is not flush with the ground, for each inch off the ground the ramp must be 8 inches long.

Lifts may be marked to identify the preferred standing position (suggested, not required)

Have the driver bring the lift up to the fully raised position (but not stowed):

- When in the fully raised position, the platform surface must be horizontally within 5/8 inch of the floor of the vehicle.
- The platform must not deflect more than 3 degrees in any direction. To test this, stand on the edge of the platform and carefully jump up and down to see how far the lift sways.
- The lift must be designed to allow boarding in either direction.

While inside the vehicle:

- Each securement system must have a clear floor area of 30 inches wide by 48 inches long.
- The securement system must accommodate all common wheelchairs and mobility aids.
- The securement system must keep mobility aids from moving no more than 2 inches in any direction.
- A seat belt and shoulder harness must be provided for each securement position, and must be separate from the security system of the mobility aid.

Vehicles under 22 feet must have:

- One securement system that can be either forward or rear-facing.
- Overhead clearance must be at least 56 inches. This includes the height of doors, the interior height along the path of travel, and the platform of the lift to the top of the door.

Vehicles over 22 feet must have:

- Must have 2 securement systems, and one must be forward-facing, the other can be either forward or rear-facing.
- Overhead clearance must be at least 68 inches. This includes the height of doors, the interior height along the path of travel, and the platform of the lift to the top of the door.
- Aisles, steps, and floor areas must be slip resistant.
- Steps or boarding edges of lift platforms must have a band of color which contrasts with the step/floor surface.
